Another area where our password agent is number one is password generation. Password generator bases on 4 password generation methods - random passwords (so-called strong passwords), mnemonic passwords by a dictionary, template-defined passwords and strong passwords based on a word and a key.

“ Using the HTML A tag or calling the String.anchor method. The JavaScript runtime engine creates an Anchor object corresponding to each A tag in your document that supplies the NAME attribute. ”

First Name NAME [Company Name]

### KEEPER FEATURES

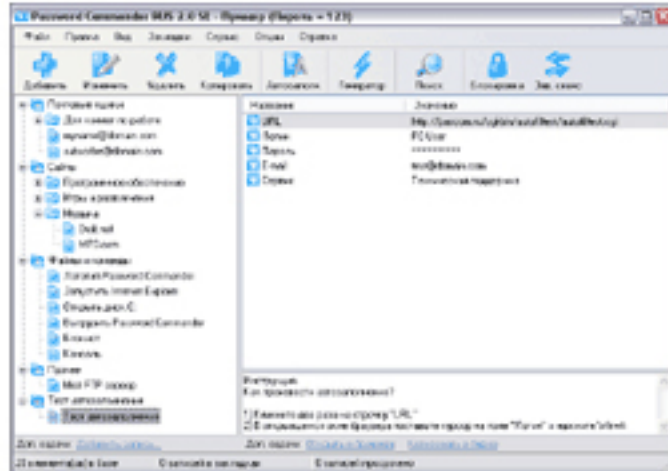

- Creates personal account for each member of your family
- Encrypts passwords with Blowfish
- Something else

➤ [more features...](#)

### FREE Edition

Most password keepers just store and fill in passwords and logins for different web pages. People grew accustomed to these nice form fillers, they more thickly use password saver (because they want to keep passwords safe), password storage, password finder and other password tools.

It does not just fill in password and login fields - it can automatically fill (autofill) in all required fields for websites and any Windows application. Can you think of a second password manager capable of that? You will love this feature, whether you have only a couple of passwords or couple of hundreds. [Test AutoFill now!](#)

Password security is another important issue where Password Commander, our perfect password organizer, stands out. Password Commander developers opted for the open architecture model, supporting third party encryption plug-ins.

## Screenshots

### ■ Password Manager. Autofilling forms.

#### Main program window

Password Commander has a friendly and easy-to-use interface with a nice-looking graphic design.

All data in the program are presented in the form of a tree-like hierarchic structure, which provides both for the possibility to group records topically into categories and for comfortable navigation.

[Flash demo movie](#)

Make Password Commander fills in all your data.

## Frequently Asked Questions (FAQ)

*How do I change a password for an account? When I try to change it, the program displays the message "Unable to change the password for AutoLogin-account Change the account type in the options and try again". What should I do?*

You cannot change password for AutoLogin accounts because it directly depends on the unique identification number of your Windows account. That is why you should change the account type to standard if you still want to change its password. You can do it in the "Account" section of the Account Settings window.

*I have not installed any encryption plug-ins. What algorithm is used to encrypt my password database?*

Data in your database are obfuscated first and then compressed by the LHA algorithm. It is not actually encryption, but this method provides some data protection.

*How do I create skins/plugin-ins?*

Visit the "For Developers" section on our site where you can find all the documentation you need.

*How do I import data from SuperDuper Password Manager into Password Commander?*

There is no automatic importing system so far, so the only way to do it is manually.
